Fast Results
Fewer steps mean faster results. Designing custom Web pages with PhotoImpact's time-saving tools. Use the 3-step Web Component Designer to create your own headers, rollovers and other essential Web elements. Instant browser preview shows your results without saving to HTML, and one-click saves your entire project as a Web page. Version 6 includes a new Animation Studio that lets you produce cool GIF animations or instantly apply wild special effects. It also is possible to graphics or objects by double-clicking an EasyPainter thumbnail. Other time-saving tools include a Quick Command Panel for re-applying a series of actions to any graphics and batch processing for applying a command to multiple images.
